

# Nathan C. Johnson

810.391.6424 | njohns48@emich.edu | nathanieljohnson.me | github.com/nathan815

## OBJECTIVE

Seeking a software development internship for summer of 2019.

## EDUCATION

**Bachelor of Science, Computer Science** 2016 - 2020 (Expected)

Eastern Michigan University, *Ypsilanti, MI*

Cumulative GPA: 3.74

## TECHNICAL SKILLS

- **Languages** JavaScript, Java, PHP, SQL, HTML, CSS & SASS
- **Frontend** VueJS, Vuex, Laravel, React, React Native, Bootstrap, Android, Socket.io
- **Backend** Linux, Apache, Nginx, MySQL, Firebase, NodeJS
- **Tooling** IntelliJ IDEA, Android Studio, PhpStorm, Eclipse, XDebug, Bash
- **DevOps & Code Management** Git, GitHub, Bitbucket, CVS, FogBugz, Travis CI, Digital Ocean

## EXPERIENCE

**Software Engineer Part-Time | Learning A-Z** Ann Arbor, MI (September 2018 - Present)

- Fix bugs and make improvements to a large PHP/Java codebase with thousands of classes
- Analyze and improve complex SQL queries relating to bugs
- Use PHP XDebug to step through various areas of the codebase to pinpoint bug occurrences and understand the flow of code execution

**Software Engineering Intern | Learning A-Z** Ann Arbor, MI (May 2018 - August 2018)

- Created the offline books feature on the Kids A-Z Android app (Android Studio, Java, PHP)
- Learned the core concepts of Android development, including fragments, XML layouts, list adapters, restoring state, multithreading, and Java garbage collection
- Developed a system in the app to determine internet connectivity
- Gave a presentation on building mobile apps with React Native to interns and managers

## PROJECTS

**The Swan Station** *theswanstation.net* (April 2014 - Present)

- A web-based game that simulates the Hatch from the Lost TV series. It is a collaborative effort and competition where users race to enter a code every 108 minutes to "save the world" and earn points.
- Working on rebuilding from the ground up with a more organized architecture
- *Technologies:* VueJS, Laravel, PHP, MySQL, Redis, Socket.io, NodeJS

**EcoSPAN – Voice of the Community Award, SpartaHack 4** (January 2018)

- An iOS app built with Swift to help people in a crisis that allows communication from phone-to-phone without any internet or cellular connection
- *Technologies:* Swift, XCode, Multipeer Connectivity Framework

**FishNet – Second Place, GrizzHacks 2** (October 2017)

- An Android app that helps make your fishing life easier and lazier
- The app works with a Bluetooth fishing bobber to alert you when a fish has been caught
- Lets you share a picture/info about it as well as plotting the catch location on a map
- *Technologies:* JavaScript, Ionic Mobile framework, Firebase backend, Google Maps API, Bluetooth
